OnePath Diagnostics becomes first U.S. laboratory to install the ARGOS 6X Slide Scanner System

The six-scanner system by ARGOS, distributed by Axlab, expands OnePath's scanning capacity as the laboratory prepares for its next stage of growth.

Jacksonville, Fla. – OnePath Diagnostics announced that it is the first laboratory in the United States to install the ARGOS 6X, a high-capacity digital pathology system that combines six independent scanners, robotic slide handling, automated rescanning and archiving in one system.

“At OnePath, we are digitizing 4,500 slides per day received from all over the country,” said Westley “Wes” J. Bernhardt, Managing Partner of OnePath Diagnostics. “We believe the ARGOS 6X has already helped and will continue to help us effectively manage this volume on a consistent and reliable basis. We are excited for the partnership with Axlab as the ARGOS becomes a central component in our digital pathology workflow.”

The ARGOS 6X was purchased from Axlab, a distributor of diagnostic technologies, working in partnership with ARGOS, the manufacturer behind the ARGOS 6X Slide Scanner System. ARGOS is already an established technology in Europe, and the OnePath installation marks the first U.S. deployment of the ARGOS 6X. Axlab is expanding into the United States with automation instruments that help to support faster patient pathways.

“OnePath is exactly the kind of partner we want for our first ARGOS 6X installation in the U.S. They run a lab built around digital pathology, and they're leading the way. We're proud to support them as they grow,” said Søren Christensen, Chief Executive Officer of Axlab.

About OnePath Diagnostics

OnePath Diagnostics is a healthcare technology company based in Jacksonville, Florida, specializing in digital pathology. By connecting subspecialty pathologists through digital technology, OnePath provides diagnostic expertise, histology services, and laboratory support to physician groups, laboratories, hospital systems, and AI companies nationwide. Its mission is to improve patient care and outcomes by delivering advanced subspecialty diagnostics and state-of-the-art technology to physicians, hospitals, and healthcare systems.

About Axlab

Axlab is a Danish-founded company providing automation and innovation solutions for pathology labs, from histology to digital pathology, with systems in use across Europe, the U.K. and the U.S. Axlab supplies the ARGOS 6X in partnership with its manufacturer, ARGOS, and is growing its U.S. presence with automation instruments that help to support faster patient pathways.
